

SCMA Seamer

These equipment allow the automatic peeling and crimping of multi-core single-core cables inside a multi-core cable. Depending on the model they differ from a simple system that allows these single-core cables to be flattened, thus aligning them with each other and then being transported with a transfer under the crimping machine with which it is equipped. Once set up with the appropriate centerers and spacers, the single-core cables are crimped quickly and automatically. Also including a touch screen display completely in Italian or even in English.
